Digital Advantage

UI/UX CONCEPT BOARD · V2.8 · AFTER PILOT ROUND 1

Find the tools people in your job use. Learn them step by step.

27 responsive reference screens built in code with the real tokens, a complete asset library and the checks that keep the build true to the concept.

Patch for Product Pack V2.7 · Concept imagery generated with Microsoft Copilot

What the pilot told us, and what changed

17 responses · NPS −6 · core value works (15/17 learned a new tool) · the gaps are personal relevance, next steps, trust and calm.

WE HEARD	V2.8 CHANGE	DECISION
Promise unclear (LMS? outsourcing?)	**One promise as the H1: find the tools for your job, learn them step by step**	D-104
Path not "written for me" (8/17 neutral)	**Job-specific paths first; DepthLabel on every path; general guides say so**	D-094
Next step unclear (7/17 neutral)	**NextStepCard ends every content page**	D-092
Stuck opening a path (2/17)	**"Learn {tool}" on every tool row and tool page**	D-092
Trust neutral (6/17)	**TrustLine: price + Checked date or Preview, everywhere**	D-093
"Loud colours, too much information"	**Colour budget, one primary button per view, more space, no infinite motion**	D-095
Helper bar confusing (4/17)	**Explainer banner + first-run coach mark + hide**	D-100
iPhone text cut off; dead button	**Overflow guard, reserved space for fixed bars, dead-control test**	D-101
Needs only partly match (8/17)	**/ "Right for your work?" on each need**	D-102
More occupations wanted	**"Suggest my role" on browse and no-match**	D-103

Seven principles for V2.8

P1
For my job, first
Job-specific content before general content. General is labelled.

P2
Always a next step
Every page ends with one NextStepCard.

P3
Calm by default
≤ 3 hues, 1 primary button per view, generous space.

P4
Honest, visibly
Price, checks and depth labels are UI, not fine print.

P5
Explain once
New patterns get one sentence, the first time only.

P6
Phone first, nothing cut off
Designed at 390 px; fixed bars never cover content.

P7
Inclusive
WCAG 2.2 AA, 24 px minimum targets, plain English.

Colour: tokens are law

Same values as design/tokens/tokens.json. Category hues appear only in small tiles and tags (D-095).

LIGHT

Tools for this goal

Real employers don't charge you to apply or to be hired. Check the company before you share documents.

STEP 1 · WHO ARE YOU?

DA-7K2Q-91

New in V2.8 (see screens)

- **NextStepCard**: ink card, one action, last block of every content page
- **Learn {tool}** button on every tool row
- **TrustLine**: price chip + Checked date / Preview
- **DepthLabel**: For your job · In depth · General guide
- **Need feedback**: 👍/👎 "Right for your work?"
- **Helper explainer + coach mark**
- **Suggest my role**
- **Trust strip** on home

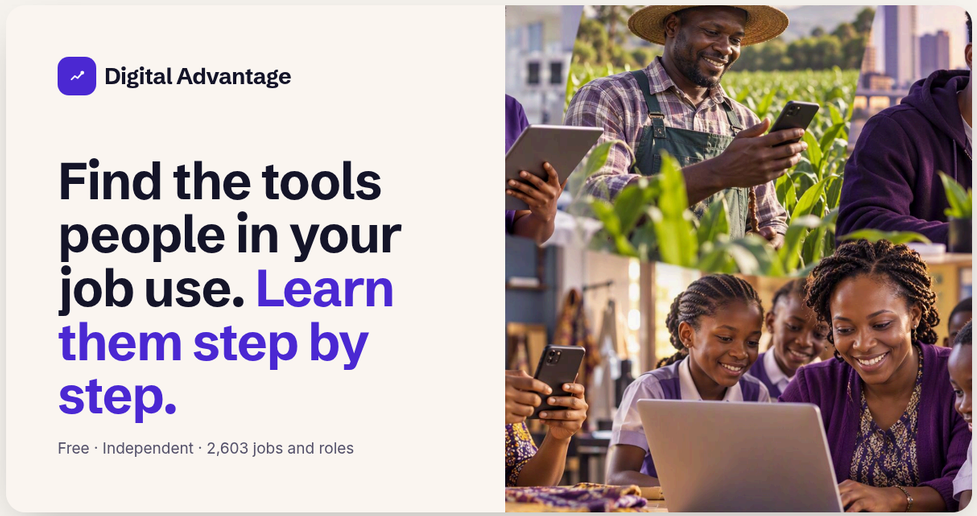
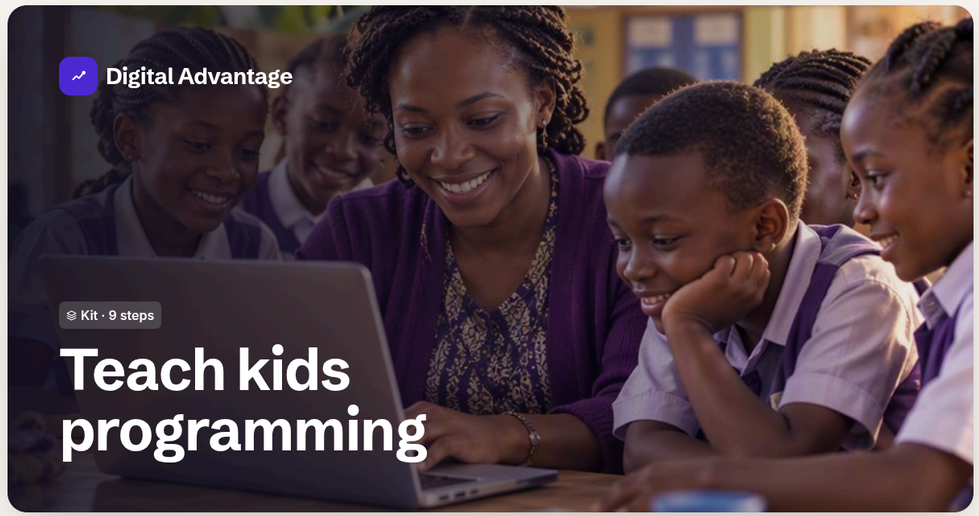
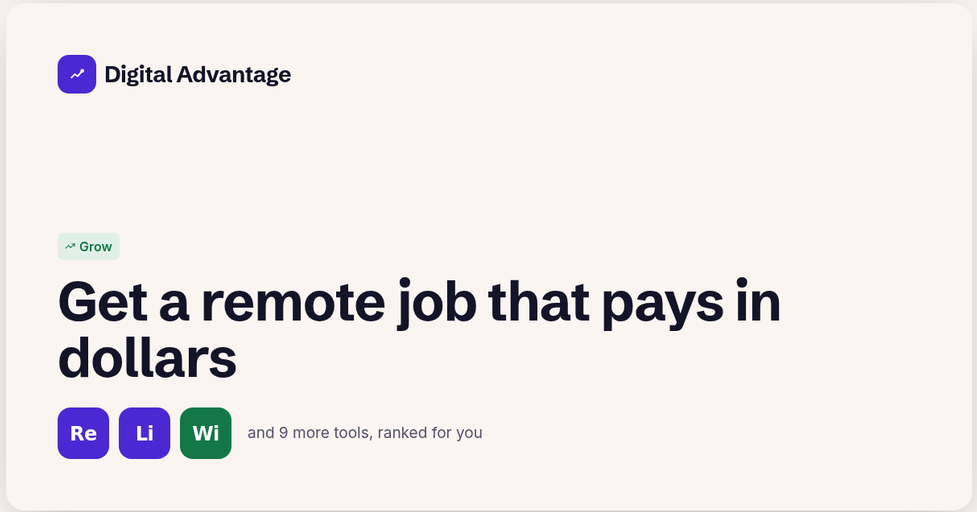
Get a remote job · Start freelancing and win your first client · Edit a short video · Teach kids programming · Learn to code from zero · Break into tech · CV, portfolio and proofreading pack
Sell on WhatsApp · Start and register a business in Nigeria · Stay safe online and avoid scams · Keep my child safe online · Write clearly and correctly · Get paid from abroad
Start a YouTube or TikTok channel · Study and learn for free · Farm smarter and sell better · Run a small shop or business day to day · Open an online shop · Build a brand people trust · Teach online
Pass my exams · Write and publish a book · Record and release my music · Run a small clinic or practice · Plan an event or wedding · Earn with a car, bike or delivery rides · Understand and file my taxes
Learn and use AI well · Manage money and family life

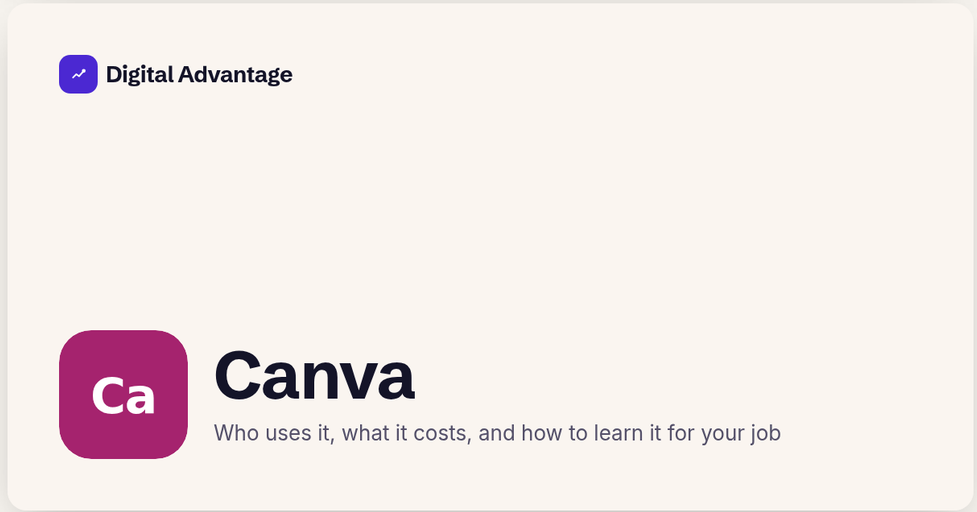
Brand kit and share images

Logo mark, outlined wordmark, favicons (SVG with dark mode, ICO), PWA and maskable icons, web manifest and four 1200×630 OG images.









What stops the build drifting from this board

You can't make drift impossible, but V2.8 makes it blocked by CI and visible in review (doc 29).

L1

One source of values

tokens.json → generated CSS/TS/Tailwind; drift fails CI

L2

Same stylesheet

App imports da.css; components reuse class names and data-da

L3

Closed asset set

Only these fonts, photos, icons, logos, illustrations

L4

Static lint

check-design.mjs: raw colours, fonts, icon libs, external images

L5

Runtime audit

design-audit.mjs: components, styles, overflow, targets, fonts

L6

Owner sign-off

Side-by-side report; SIGNOFF.md

L7

No silent regressions

Approved screenshots become visual tests

Self-test passes

The audit runs on these reference screens: 27 screens × phone/desktop × light/dark = 108 checks, 0 failures.

Find the tools people in your job use.
Learn them step by step.
